COMMENTS ON FIRST SESSION(S) STAGE 1 3 SEPTEMBER 1987

The first ideogram was a shock, but after all the sessions today, I am starting to feel comfortable about my hand taking off reflexively. I am still physically tense for the first ideogram of each set (?from being worried about getting the coordinates down right?) so it doesn't seem to flow as well. By not flowing as well. I mean the sense of the motion of it, doesn't match right on with what my hand is drawing, as if the tenseness of my hand is fighting the ideogram. The second plus iterations seem to go okay. I'm developing a trust for the ideogram, though I'm struggling a lot with vocabulary. When I touch the pen to the ideogram, I feel something but I'm having a lot of trouble verbalizing what. I found myself doing comparison with the earlier sites, (ex. "did it feel like the last one? No "), trying to come up with descriptors for the feeling. It's like chasing shadows. I need to know what more things feel like. —

The mountain site was the most interesting. The conflicting data (airiness & solid) worried me and I felt myself trying analyze, a feeling which I kept quenching. When I saw the picture, I had an instantaneous reaction of "ah<u>, there we go."</u> It definitely reinforced the attitude I'm trying to maintain of that it's just my job to get the information out-it's not my job to Gudg $\widehat{f e}$ it. I sense that in the near future as the signal line gets stronger (or rather as I let more signal in) more AOL may come with it. The information is so shadowy and elusive now that

it and AOI contrast drastically. (?)

- you can count

Busine process is more physical mental.
